

KWOC – Project Report

That amazing feeling when you make your first successful pull request is something which cannot be described in words. Thank you KWOC for providing such a great opportunity.

Getting Started

I am first year student who had no idea about the field of Computer Science and had a difficult time starting his journey in the world of open source. Choosing the project was a very challenging task for me as I knew nothing so I wanted to start with python. I wanted the project be easy enough to get me going. I choose **Code-Sleep-Python**. This repository contains a curated list of the awesome small projects made in Python.

Work/Challenges

I did a course for Git on Coursera which took time but was able to complete with satisfaction. I started getting help from my mentor Prateek Chandra. I setup my local git and started working. I started late and had a commit till 15th of December. I learned a lot about pygames package of python, how to write good code, how to use git and github but most importantly about open source. It was a great experience and most importantly I learned a lot.
